Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 64-84 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tong et al (*Normal Human Skin Lymphocytic and Langerhans' Cell Responses to Intradermal Interferon α -2 β Injections*) as modified by Gross et al (US 5,848,991) OR Prausnitz et al (US 6,611,707).

Tong et al disclose that it is known to inject interferon into an intradermal space within mammalian skin. Tong et al do not expressly disclose the device which is used for the injection. Gross et al disclose in column 4, lines 10-16 that it is known to perform intradermal injections using a needle having an exposed height between 0 and 1mm and an outlet inserted into the skin to a depth between 0.3 and 2mm. Prausnitz et al disclose it is known to use a multimicroneedle array having a length between about 0.5mm and 1.7mm with an outlet from 0 to 1mm in column 3, line 66 - column 4, line 3. It would have been obvious to one having ordinary skill in the art to modify the method of Tong et al with the device of Gross et al OR Prausnitz et al, since such a modification would provide for interferon delivery to the intradermal space in a precisely control manner which causes little or no trauma to the skin.

As to claims 65, 66, 75, and 76 it is the Examiner's position that since the method of Tong et al as modified by Gross et al discloses the same method as claimed by the Applicant, it would be obvious that the method of Tong et al as modified by Gross et al would also produce an improved pharmacokinetic profile compared to a subcutaneous injection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CATHERINE N. WITCZAK whose telephone number is (571)272-7179. The examiner can normally be reached on Monday through Friday, 8-5 EST.
